Question 1.5.9

EE22BTECH11054 - Umair Parwez

Question 1.5.9

Given triangle ABC with vertices,

$$\mathbf{A} = \begin{pmatrix} 1 \\ -1 \end{pmatrix}, \mathbf{B} = \begin{pmatrix} -4 \\ 6 \end{pmatrix}, \mathbf{C} = \begin{pmatrix} -3 \\ -5 \end{pmatrix} \tag{1}$$

find the points of contact, E_3 and F_3 , of the incircle with sides AC and AB respectively.

Solution

Required to find points of contact, E_3 and F_3 , of incircle with sides AC and AB respectively.

From previous questions we know the coordinates of the incircle are :

$$\mathbf{I} = \begin{pmatrix} \frac{-53 - 11\sqrt{37} + 7\sqrt{61} + \sqrt{2257}}{12} \\ \frac{5 - \sqrt{37} + 5\sqrt{61} - \sqrt{2257}}{12} \end{pmatrix}$$
 (2)

Radius of incircle is:

$$r = \frac{185 + 41\sqrt{37} - 37\sqrt{61} - \sqrt{2257}}{6\sqrt{74}}$$

Equation of incircle is:

$$\|\mathbf{x} - \mathbf{I}\|^2 = r^2$$

points A, B and C are:

$$\mathbf{A} = \begin{pmatrix} 1 \\ -1 \end{pmatrix}, \mathbf{B} = \begin{pmatrix} -4 \\ 6 \end{pmatrix}, \mathbf{C} = \begin{pmatrix} -3 \\ -5 \end{pmatrix}$$

Parametric equation of AC is:

$$\mathbf{x} = \mathbf{A} + k\mathbf{m} \tag{6}$$

where,

$$\mathbf{m} = \mathbf{A} - \mathbf{C}$$

Substituting (5) in (3):

$$||\mathbf{A} + k\mathbf{m} - \mathbf{I}||^2 = r^2 \tag{8}$$

$$(k\mathbf{m} + (\mathbf{A} - \mathbf{I})) \cdot (k\mathbf{m} + (\mathbf{A} - \mathbf{I})) = r^2$$

$$k^{2} \|\mathbf{m}\|^{2} + 2k\mathbf{m}^{T}(\mathbf{A} - \mathbf{I}) + \|\mathbf{A} - \mathbf{I}\|^{2} = r^{2}$$
 (10)

Since AC is tangent to the incircle, the discriminant of the obtained quadratic equation is zero and the value of k is given as:

$$k = -\frac{\mathbf{m}^T (\mathbf{A} - \mathbf{C})}{\|\mathbf{m}\|^2} \tag{11}$$

Upon substituting the values of A, C, I and m into (11) we get,

$$k = \frac{-4 - \sqrt{37} + \sqrt{61}}{2} \tag{12}$$

Substituting (12) back into (5), we get point of contact with AC,

$$\mathbf{E}_{3} = \begin{pmatrix} \frac{-2 - \sqrt{37} + \sqrt{61}}{2} \\ \frac{-6 - \sqrt{37} + \sqrt{61}}{2} \end{pmatrix}$$
 (13)

Now let us find the other point of contact, with AB.

(3) Parametric equation of AB is:

$$x = \mathbf{A} + k\mathbf{m} \tag{14}$$

where,

(4)

(7)

$$\mathbf{m} = \mathbf{A} - \mathbf{B} \tag{15}$$

(5) We can get the value of k by replacing C with B in Eq(11). Upon substituting the values, we get,

$$k = \frac{-37 - 4\sqrt{37} + \sqrt{2257}}{74} \tag{16}$$

Substituting (16) back into (14), we get point of contact with AB,

$$\mathbf{F}_{3} = \begin{pmatrix} \frac{-111 - 20\sqrt{37} + 5\sqrt{2257}}{74} \\ \frac{185 + 28\sqrt{37} - \sqrt{2257}}{74} \end{pmatrix}$$
 (17)

(9) Diagram is shown on next page.
